

## MEDICATION ASSISTED TREATMENT FOR ALCOHOL USE DISORDER

**Medication Assisted Treatment (MAT)** uses medication such as Campral® (acamprosate), Vivitrol®/Revia™ (naltrexone) or Antabuse® (disulfiram), in combination with counseling and behavioral therapies, to treat alcohol use disorder and to help sustain recovery. The medications directly target and normalize the brain chemicals disrupted by alcohol.

**MAT** has been proven to help individuals modify their behavior and encourage positive lifestyle changes for long-term success.

### MAT Goals:

- » Reduce withdrawal and cravings
- » Provide freedom from alcohol-induced highs and lows
- » Change your constant thoughts about alcohol
- » Focus on lifestyle changes that lead to healthy living
